## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-3, 8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, after the word "predetermined" it is unclear what comes after or what is predetermined.

Claim 2 is rejected for incorporating the deficiencies of its base claim.

Claim 3 recites the limitation "the lateral force" in line 4. There is insufficient antecedent basis for this limitation in the claim.

Claim 8 recites the limitation "the display means" in lines 1-2. There is insufficient antecedent basis for this limitation in the claim.

### ***Claim Objections***

Claim 4 is objected to because of the following informalities: in line 21, the word "thedeivation" should be separated to - - the deviation - -. Appropriate correction is required.

Claim 10 is objected to because of the following informalities: in line 2, one of the words apparently "the" should be deleted in "a the" before the word vehicle. Appropriate correction is required.

***Allowable Subject Matter***

Claims 4-5, 7, 10 are allowed.

The prior art fails to disclose the initialize mode memory means in which a lateral force is measured, by using the force sensor for detecting input force from the wheel to the vehicle body, when the vehicle which is set to an optimum alignment state is run on a road surface as reference under a predetermined condition and deviation of fluctuation rate of lateral force with respect to the optimum alignment state is measured and stored; monitor mode memory means in which the lateral force is measured, by using the force sensor, when the vehicle thereafter is run on the road surface and deviation of fluctuation or fluctuation rate of the lateral force with respect to the optimum alignment state is measured, and stored; analyzing computation means in which change of the alignment state of the vehicle is analyzed on the basis of ratio of the deviation stored in the monitor mode memory means with respect to the deviation stored in the initialize mode memory means. These limitations are neither taught nor obvious by the prior art of record.

It is also advised to add the allowable subject matter into claim 3 in order to avoid another rejection.

***Conclusion***

This application is in condition for allowance except for the following formal matters:

As stated above.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 25 USPQ 74, 453 O.G. 213, (Comm'r Pat. 1935).

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
